

ENGINE DETAILING CHECKLIST

01

Check the temperature around the engine. Only clean the engine when it is in a cooled-down state.

02

Protect water sensitive areas (i.e. battery, alternator, air filter) with plastic and electrical tape.

03

Rinse the engine using light pressure.

04

Apply all purpose cleaner. Work in the product with a soft bristle brush. Heavy degreasers may damage engine components, they are also hazardous for the environment and your health.

05

Rinse the engine to lift away dirt.

06

Dry the components using a terry towel. Compressed air is also safe and effective. Caution when removing plastic bags to avoid having pooled water spill on sensitive parts.

07

Run the car for 1-2 minutes and verify there are no issues or dashboard warning lights.

08

Applying dressing to protect and rejuvenate the engine components. Avoid solvent based dressings as they dry out rubber hoses and plastic covers.

RECOMMENDED TOOLS

Q-tips
Wheel Woolie
Lug Nut Brush
Towels
Electrical Tape
Plastics Bags
Applicator Pad
Compressed Air (optional)
